EDUCATION

Ph.D., Statistics & Operations Research

May 2026

University of North Carolina at Chapel Hill

Dissertation: *Scalable Spatial Extreme Value Data Fusion with Applications to Coastal Hazard Projection Under a Changing Climate*.

Advisor: Richard L. Smith.

M.A., Mathematical Statistics

2020

Wake Forest University · Full scholarship with stipend

B.A., Environmental Studies (Ecology)

2018

University of North Carolina at Asheville

EXPERIENCE

Biostatistician

2022 – Present

Wake Forest School of Medicine, Dept. of Biostatistics & Data Science

Opioid misuse surveillance: implementing and contributing to the development of Bayesian models that integrate fragmented data sources across spatial and temporal scales to estimate the size of hidden populations, and working with state health departments to turn these estimates into operational tools. Supported by NIDA R01DA052214 (MPIs: Kline, Hep-ler). NIH LEAP trial: contributing statistician for anti-obesity medication RCT. Clinical collaboration across surgery, pediatrics, gerontology, and gastroenterology. Causal inference on observational EHR data.

Graduate Research Assistant

2020 – 2026

University of North Carolina at Chapel Hill

Forecasting extreme coastal water levels across climate scenarios by fusing physics-based ocean simulations with historical tide gauge observations via scalable Gaussian processes.

Graduate Teaching Assistant

2018 – 2026

UNC Chapel Hill & Wake Forest University

Machine Learning, Statistical Modeling, Biostatistics, Data Analysis, Discrete Mathematics, Regression.

SKILLS

Foundations: Measure-theoretic probability, asymptotic theory, stochastic processes, optimization, real and functional analysis

Methods: Bayesian hierarchical modeling, MCMC, spatial/spatiotemporal statistics, extreme value theory, Gaussian processes, causal inference, experimental design, survival analysis, mixed models

Computing: Python, R, PyTorch, Stan, JAGS, SQL, $\text{\LaTeX}$, Git, Linux, HPC/Slurm
